## How To Uninstall Your Windows Product Key Before You Sell Your PC

### Enter a product key to activate Windows

Your product key should be on the box that the Windows DVD came in or in an email that shows you bought Windows. You need to be signed in as an administrator to enter a product key for Windows activation. It looks similar to this:

Product key

DASHES WILL BE ADDED AUTOMATICALLY

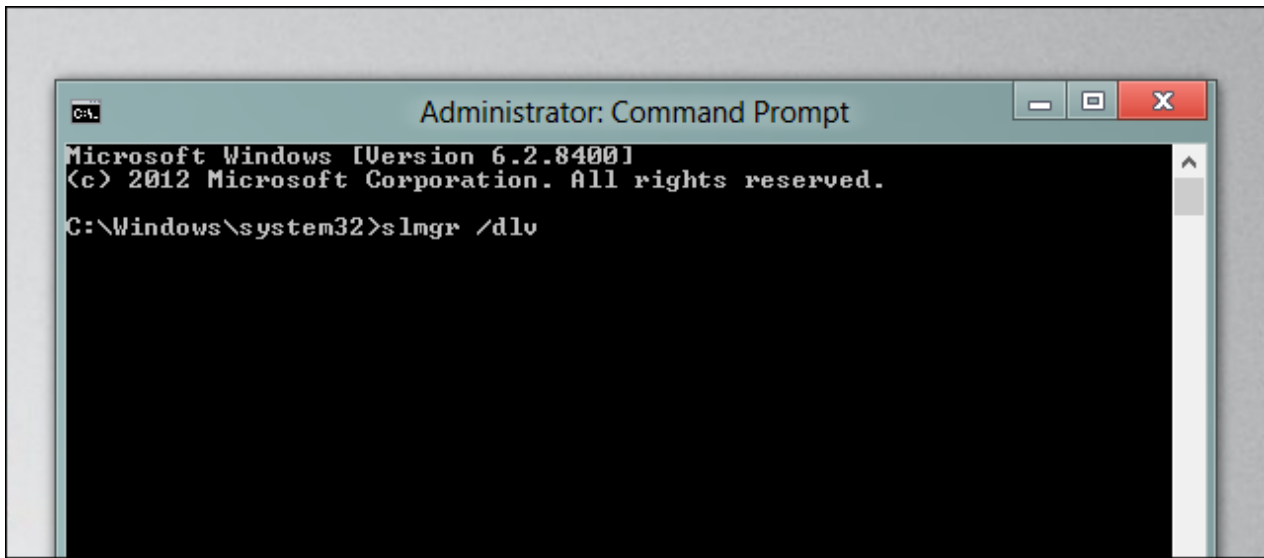

Do you have an old PC you want to sell, but also want to use your Windows license on your new PC ? There is a hidden command in Windows that allows you to do just that. Read on to find out more.

*Note: Between Microsoft and your OEM there are a number of different laws that determine whether you are allowed to use your license on another PC, so follow this tutorial at your own risk. Additionally before you go through the tutorial you will want to check that your product key is still attached to your PC/Installation CD, if it is not , do a quick Google search on how to recover it.*

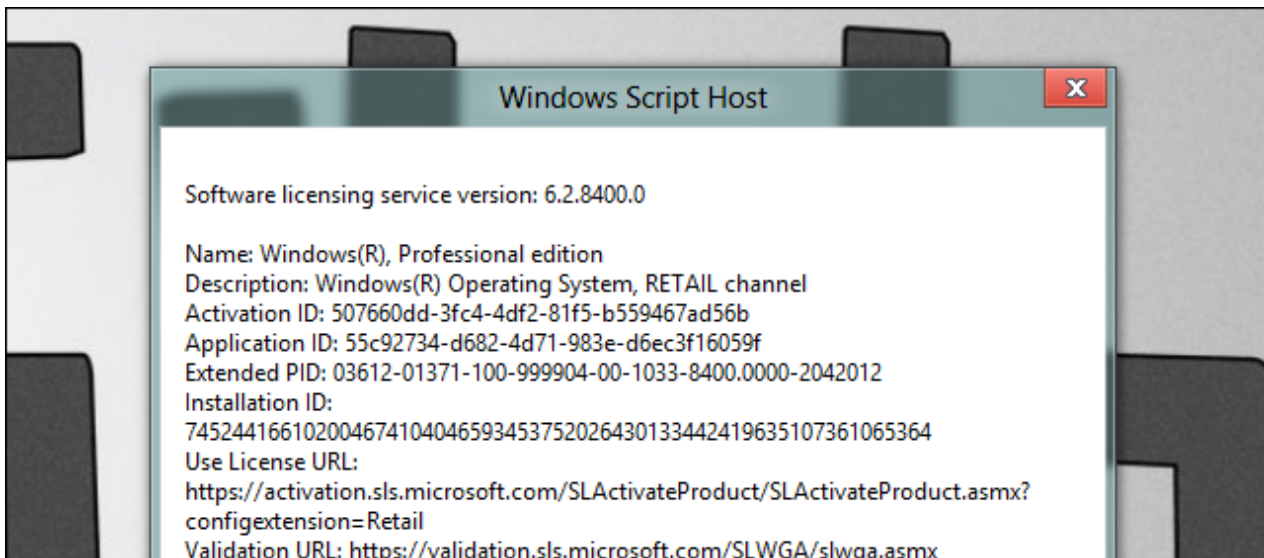

## Uninstalling Your Product Key

The first thing we need to do is get our activation ID, to do this fire up an administrative command prompt and run:

```
slmgr /dlv
```

Windows will open a message box and tell you a bunch of information about the license status of your PC, take note of your activation ID.

To uninstall your product key you need to use the /upk switch, along with your activation ID:

```
slmgr /upk 507660dd-3fc4-4df2-81f5b559467ad56b
```

If you do it correctly you will be told that your product key has been uninstalled.

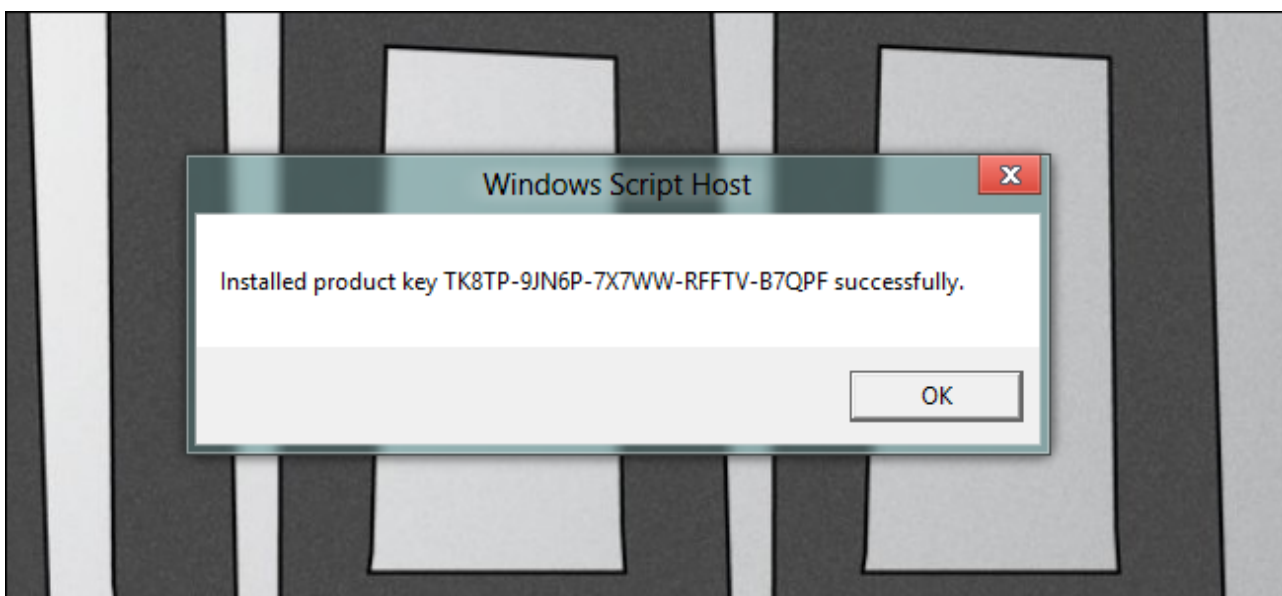

## Installing Your Product Key

Installing your product key on your new PC is just as easy, all you need to do is fire up an administrative command prompt and use the /ipk switch.

If your key is valid you will be told that your key was installed.

That's all there is to it.
